

*AMENDMENTS TO THE ABSTRACT*

Replace the Abstract with:

In a combination of, for example, a rotor~~1~~ having ~~8~~ eight magnetic poles and a stator~~2~~ having ~~12~~ twelve slots and pulsating components of permeance, which generate a sinusoidal cogging torque having ~~substantially sine waves and~~ maxima of the same number as ~~that~~ the number of poles of the rotor~~1~~, pressurizing parts~~3~~ arranged in ~~four~~ predetermined positions ~~pressurize~~ applying a force at an outer periphery of the stator~~2~~ ~~inward~~ directed inwardly to ~~thereby~~ cancel the pulsating components of the cogging torque ~~having the same number as that of the poles of the rotor 1.~~
